Description

Background: Enterprise customers require the ability to mandate SSO login across their workspace, preventing members from authenticating via email/password or OAuth providers. Currently, admins have no mechanism to enforce this at the workspace level.

Acceptance Criteria:

- Given I am a workspace admin, when I navigate to Security Settings, then I can see an "Enforce SSO" toggle, disabled by default.
- Given I enable "Enforce SSO", when a member attempts to log in via email/password or Google OAuth, then they are redirected to the SSO login flow and shown the message: *"Your workspace requires SSO authentication."*
- Given SSO is enforced, when an existing member's session expires, then they cannot re-authenticate via any method other than SSO.
- Given I am the last admin in the workspace, when I attempt to enable "Enforce SSO" without having configured an SSO provider, then the toggle is disabled and I see the inline error: *"You must configure an SSO provider before enforcing it."*
- Given SSO enforcement is active, when I disable the toggle, then all authentication methods are immediately restored with no session interruption for currently logged-in members.

Out of scope:

- SCIM provisioning
- Per-user SSO exemptions
- Audit log entries for SSO enforcement changes

Dependencies:

- SSO provider configuration (SAML 2.0 / OIDC) must be completed prior to enforcement
- Requires workspace plan: Enterprise only
